Shenkman Capital Short Duration High Income Fund

March 31, 2024

ABOUT SHENKMAN

Shenkman Group of Companies manages over $31.6 billion in assets*, $7.4 billion of which is in our high yield short duration strategy. The firm was founded in 1985 by Mark Shenkman, a pioneer in leveraged finance. We focus exclusively on analyzing and investing in high yield companies. We have offices in New York, NY, Stamford, CT, Boca Raton, FL, and London, UK.

*The Shenkman Group of Companies AUM represents $28.4bn managed by Shenkman Capital Management Inc. and $3.2bn managed by Romark Credit Advisors LP and its relying advisors. See disclaimers for additional important information on the Shenkman Group of Companies.

SHENKMAN ADVANTAGES

- **Philosophy:** Shenkman focuses first and foremost on capital preservation and avoiding defaults, which in our opinion are the two key drivers of success in short duration high yield.
- **Presence:** Shenkman combines the potential advantages of a $31.6bn high yield platform with the nimbleness of a $7.4bn short duration strategy.
- **Depth of Research Team:** Shenkman's 21 member credit research team is organized by sector with each analyst responsible for the entire capital structure and maturity spectrum.
- **Risk Management:** Innovative credit risk analytics that can help to outperform in difficult and uncertain markets.

§ (with transaction costs)

Performance shown for a share class before its inception is based on the performance of the Institutional Class, adjusted to reflect the fees and expenses, and any applicable sales charges of the share class shown.

[1]Data as of 03/31/24 is average annual total returns. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Fund performance current to the most recent month-end may be lower or higher than the performance quoted and can be obtained by calling 1-855-SHENKMAN.

Performance data shown with load reflect the Class A maximum sales charge of 3.00% and Class C maximum deferred sales charge of 1.00%. Performance data excluding the sales charges does not reflect the deduction of the sales charges and if reflected, the sales charges would reduce the performance quoted. The fund imposes a redemption fee of 1.00% on shares held for 30 days or less. Performance data does not reflect the redemption fee. If it had, returns would be reduced.

[2]Rating Agency: Standard and Poors; All ratings include each tranche within their respective ratings category.

^The adviser has contractually agreed to waive a portion of the fund expenses through January 27, 2025.

Mutual fund investing involves risk. Principal loss is possible. There can be no assurance that the Fund will achieve its stated objective. In addition to the normal risks associated with investing, bonds and bank loans, and the funds that invest in them are subject to interest rate risk and can be expected to decline in value as interest rates rise. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Diversification does not assure a profit, nor does it protect against a loss in a declining market. The SEC does not endorse, indemnify, approve nor disapprove of any security.

The Fund invests in foreign securities which involve political, economic and currency risks, greater volatility and differences in accounting methods. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Leverage may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the fund to be more volatile than if leverage was not used.

HIGH YIELD MARKET COMMENTARY

During March 2024, the high yield bond market, as measured by the ICE BofA U.S. High Yield Index (H0A0), returned 119 basis points (bps). The month culminated with a yield-to-worst of 7.75%, decreasing 15 bps since February and increasing 6 bps from the start of the year. The H0A0's spread-to-worst came in at 334 bps, decreasing 13 bps since February and decreasing 29 bps from the start of the year. The market saw CCCs outperform during the first-quarter rally, although much of this outperformance occurred earlier in the year, and the gap between BBs and CCCs narrowed in March. The average dollar price ended at 93.18, increasing 0.75 for the month and increasing 0.33 for the year. This relatively strong performance comes on the heels of two months of modest price declines in the market. The higher-quality short duration segment of the high yield market, as measured by the ICE BofA 0-2 Year Duration BB-B U.S. HY Constrained Index (H42C), also posted a relatively strong return for the month, albeit constrained by its stronger credit quality and shorter tenor. The H42C returned 0.83%, while shorter-dated U.S. Treasuries delivered a monthly return of 0.36% as measured by the ICE BofA 0-3 Year U.S. Treasury Index (G1QA).

By rating, BBs outperformed with a return of 1.25%, Bs underperformed with a return of 1.03%, and CCCs had a return of 1.24%. By sector, Automotives outperformed at 1.82%, while Telecom underperformed at -1.84% driven heavily by some larger capitalization European issuers. Performance by duration was somewhat less clear, the relatively small 10+ year option-adjusted-duration (OAD) bin outperformed at 2.52%, compared to the 8 - 10 year OAD bin which underperformed at 0.91%, and 0-2 year at 0.98%.

The high yield bond default rate rose to 1.67% as of March month-end, and the leveraged credit default rate, which includes bonds and loans, ended at 1.72%. The upgrade-to-downgrade ratio for U.S. high yield issuers came in at a negative 0.83:1 over the month. High yield bond issuance was $26.6 billion (bn), down $0.2bn month over month, but on the year the volume has been strong with most of the proceeds for refinancing. The market also saw approximately $4.3bn of "Rising Stars" and $1.75bn of "Fallen Angels" over the month.

FUND COMMENTARY

The Shenkman Short Duration High Income Fund (the "Fund") posted a positive return for the period, trailing the broader high yield market, as measured by the H0A0, though outpacing shorter-dated U.S. Treasuries. Performance by credit rating echoed the broader high yield market's pattern, with CCC-rated credits posting the strongest returns while BB-rated credits trailed the group. On a sector basis, all sectors posted positive returns with Leisure, Gaming, Travel and Industrials posting the strongest contributions while Real Estate and Consumer Staples Discretionary posted the smallest contribution. The Fund's duration-to-worst was relatively unchanged at 1.5 years while the Fund's average bond price eased to $98.90. The Fund's average final maturity remained unchanged at 2.5 years, though continues to highlight a relatively conservative maturity profile which has seasoned lower versus a year ago given 2023's slower refinancing activity. Corporate action activity in the Fund accelerated compared to the prior month given the greater capital market and refinancing activity. During the month, 6 bonds were called, representing $63.8 million in proceeds (approximately 3.3% of the Fund's average market value) which were redeployed in other short duration opportunities at what we believed were relatively attractive levels given the continued discount price environment. The Fund continues to seek compelling risk-adjusted return opportunities and strong credit selection as it remains mindful of liquidity risks and the interest rate outlook.

The high yield market (as measured by H0A0) posted returns exceeding their expected monthly coupon rates for March. Looking ahead to the remainder of this year, the refinancing cycle is expected to remain significant, and in our opinion, merger and acquisition (M&A) activity may become more prevalent in leveraged finance. We believe that this trend will keep defaults modest, thereby rationalizing spreads that are currently tighter than historical averages. We continue to believe the higher-quality short duration segment of the high yield market remains well positioned as a lower volatility solution with the ability to seek to capture attractive risk-adjusted returns in the current environment.

The VIX Index is a measure of implied volatility in the stock market that is calculated on the basis of short-term index options on the S&P 500 Index. A high VIX index signals anxiety and fear in the market and typically occurs after a sharp decline in stock prices. A low VIX index generally follows calm markets and rising prices.

Basis point (BPS) is a value equaling one one-hundredth of a percent (1/100 of 1%).

The Consumer Price Index (CPI) is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care.

Coupon is the periodic interest payment made to the bondholders during the life of the bond. Prepayment risk refers to payments made in excess of scheduled mortgage principal repayments.

Coupon rate is the nominal yield paid by a fixed-income security. It is the annual coupon payments paid by the issuer relative to the bond's face or par value.

Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates; it is expressed as a number of years.

Duration-to-worst is the duration of a bond computed using either the final maturity date, or a call date within the bond's call schedule, whichever would result in the lowest yield to the investor.

Effective duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change.

The European Central Bank (ECB) is the central bank responsible for monetary policy of the European Union (EU) member countries that have adopted the euro currency.

A fallen angel is a bond that was once rated as investment grade but has fallen to junk-bond status because of the issuing company's poor credit quality. A rising star is a bond that is rated as a junk bond but could become investment grade because of improvements in the issuing company's credit quality.

Mergers and acquisitions (M&A) is a general term that refers to the consolidation of companies or assets through various types of financial transactions. M&A can include a number of different transactions, such as mergers, acquisitions, consolidations, tender offers, purchase of assets and management acquisitions.

Option Adjusted Duration (OAD) is is a measure that helps approximate the degree of price sensitivity of a bond to changes in interest rates adjusted for the option to call or put.

Option Adjusted Spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option.

Par - The term at par means at face value. A bond, preferred stock, or other debt instruments may trade at par, below par, or above par.

Tenor refers to the length of time remaining before a financial contract expires.

S&P ratings represent Standard & Poor's opinion on the general creditworthiness of a debtor, or the creditworthiness of a debtor with respect to a particular debt security or other financial obligation. Ratings are used to evaluate the likelihood a debt will be repaid and range from AAA (excellent capacity to meet financial obligations) to D (in default). In limited situations when the rating agency has not issued a formal rating, the security is classified as non-rated (NR).

Spread is the percentage point difference between yields of various classes of bonds compared to treasury bonds.

Spread-to-worst (STW) measures the dispersion of returns between the best and worst performing security in a given market, usually bond markets, or between returns from different markets.

Yield-to-Maturity is the rate of return anticipated on a bond if it is held until the maturity date.

Yield-to-Worst is the lowest possible yield from owning a bond considering all potential call dates prior to maturity.
