

Shenkman Capital Short Duration High Income Fund

April 30, 2023

ABOUT SHENKMAN

Shenkman Group of Companies manages over \$29.1 billion in assets*, \$8.1 billion of which is in our high yield short duration strategy. The firm was founded in 1985 by Mark Shenkman, a pioneer in leveraged finance. We focus exclusively on analyzing and investing in high yield companies. We have offices in New York, NY, Stamford, CT, Boca Raton, FL, and London, UK.

*The Shenkman Group of Companies AUM represents \$25.9bn managed by Shenkman Capital Management Inc. and \$3.2bn managed by Romark Credit Advisors LP and its relying advisors. See disclaimers for additional important information on the Shenkman Group of Companies.

SHENKMAN ADVANTAGES

- Philosophy:** Shenkman focuses first and foremost on capital preservation and avoiding defaults, which in our opinion are the two key drivers of success in short duration high yield.
- Presence:** Shenkman combines the potential advantages of a \$29.1bn high yield platform with the nimbleness of a \$8.1bn short duration strategy.
- Depth of Research Team:** Shenkman's 21 member credit research team is organized by sector with each analyst responsible for the entire capital structure and maturity spectrum.
- Risk Management:** Innovative credit risk analytics that can help to outperform in difficult and uncertain markets.

\$ (with transaction costs)

Performance shown for a share class before its inception is based on the performance of the Institutional Class, adjusted to reflect the fees and expenses, and any applicable sales charges of the share class shown.

¹Data as of 04/30/23 is average annual total returns. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Fund performance current to the most recent month-end may be lower or higher than the performance quoted and can be obtained by calling 1-855-SHENKMAN.

Performance data shown with load reflect the Class A maximum sales charge of 3.00% and Class C maximum deferred sales charge of 1.00%. Performance data excluding the sales charges does not reflect the deduction of the sales charges and if reflected, the sales charges would reduce the performance quoted. The fund imposes a redemption fee of 1.00% on shares held for 30 days or less. Performance data does not reflect the redemption fee. If it had, returns would be reduced.

²Rating Agency: Standard and Poors; All ratings include each tranche within their respective ratings category.

[^]The adviser has contractually agreed to waive a portion of the fund expenses through January 27, 2024.

Mutual fund investing involves risk. Principal loss is possible. There can be no assurance that the Fund will achieve its stated objective. In addition to the normal risks associated with investing, bonds and bank loans, and the funds that invest in them are subject to interest rate risk and can be expected to decline in value as interest rates rise. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Diversification does not assure a profit, nor does it protect against a loss in a declining market. The SEC does not endorse, indemnify, approve nor disapprove of any security.

The Fund invests in foreign securities which involve political, economic and currency risks, greater volatility and differences in accounting methods. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Leverage may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the fund to be more volatile than if leverage was not used.

HIGH YIELD MARKET COMMENTARY

This month was marked by the start of first quarter earnings, and the High Yield Bond market, as measured by the ICE BofA U.S. High Yield Index (H0A0) posted a relatively healthy return despite some volatility from U.S. bank earnings. The H0A0 ended the month with a return of 96bps, Yield-to-Worst of 8.42%, and Spread-to-Worst of 473 basis points (bps). The higher-quality short duration segment of the high yield market, as measured by the ICE BofA 0-2 Year Duration BB-B U.S. HY Constrained Index (H42C) also posted a healthy return for the month, albeit constrained by its higher quality and shorter duration. The H42C returned 0.70%, while shorter-dated U.S. Treasuries lagged, delivering a monthly return of 0.27% as measured by the ICE BofA 0-3 Year U.S. Treasury Index (G1QA).

Results were positive across most tiers of the market. By duration, the 6-8 year Option-Adjusted-Duration (OAD) tier underperformed returning 0.54% while the 3-4 year OAD tier outperformed returning 1.18%, demonstrating that OAD was not a major differentiator over the month. By rating, the CCC segment outperformed with a return of 2.00% while BB's underperformed with a return of 0.70%, a continuation of the "risk-on" trade seen in January. By sector, Healthcare was the top performer at 1.95% while Cable & Satellite posted the only negative sector return at -0.81%.

Defaults have moved up modestly as the U.S. High-Yield Bond default rate rose to 1.42% as of April month-end and the Leveraged Credit Default rate, which includes bonds and loans, rose to 1.91%. Distressed exchange offers also saw an increase over the month. The Upgrade-to-Downgrade ratio continued to decline for U.S. High Yield and was negative on the month at 0.96:1. Notably, new issuance restarted over the month with \$11.9 billion (Bn) of High Yield Bonds coming to the U.S. market in April after a dormant March. The majority of new issuance year-to-date has been related to refinancings.

FUND COMMENTARY

The Shenkman Short Duration High Income Fund (the "Fund") posted a positive return for the period, though trailed the broader high yield market, as measured by the H0A0, given its shorter tenor and higher credit quality positioning. Performance by credit rating echoed the broader high yield markets with lower ratings outperforming as the Fund's CCC rated credits posted the strongest returns and BB rated credits trailed while still posting positive performance. On a sector basis, nearly all sectors posted positive returns with Healthcare and Leisure, Gaming, Travel posting the strongest contributions while Telecom and Real Estate posted the weakest contributions. The Fund's duration-to-worst ticked lower to 1.7 years while the Fund's average bond price rose to \$98.00. The Fund's average final maturity declined to 2.60 years, highlighting a conservative maturity profile which has helped limit the Fund's maximum duration exposure. Corporate action activity decelerated in the Fund as high yield capital market activity remained depressed versus historical levels. During the month, one bond was called, representing \$6.2 million in proceeds (approximately 0.4% of the Fund's average market value) which were redeployed in other short duration opportunities at what we believed were relatively attractive levels given the continued discount price environment. The Fund continues to seek compelling risk-adjusted return opportunities and strong credit selection as it remains mindful of liquidity risks and the interest rate outlook.

Dispersion in the High Yield Bond market has increased over the past year. We believe this trend may continue due to pressures from increasing ratings downgrades, elevated interest costs, and margin pressures. While 2022 was heavily driven by macro pressures related to eight rate hikes in the U.S., in our opinion, 2023 returns appear to be increasingly impacted by individual credit selection. We continue to believe the higher-quality short duration segment of the high yield market remains well positioned as a lower volatility solution with the ability to seek to capture attractive risk-adjusted returns in the current environment.

The VIX Index is a measure of implied volatility in the stock market that is calculated on the basis of short-term index options on the S&P 500 Index. A high VIX index signals anxiety and fear in the market and typically occurs after a sharp decline in stock prices. A low VIX index generally follows calm markets and rising prices.

Basis point (BPS) is a value equaling one one-hundredth of a percent (1/100 of 1%).

Coupon is the periodic interest payment made to the bondholders during the life of the bond. Prepayment risk refers to payments made in excess of scheduled mortgage principal repayments.

Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates; it is expressed as a number of years.

Duration-to-worst is the duration of a bond computed using either the final maturity date, or a call date within the bond's call schedule, whichever would result in the lowest yield to the investor.

The European Central Bank (ECB) is the central bank responsible for monetary policy of the European Union (EU) member countries that have adopted the euro currency.

Mergers and acquisitions (M&A) is a general term that refers to the consolidation of companies or assets through various types of financial transactions. M&A can include a number of different transactions, such as mergers, acquisitions, consolidations, tender offers, purchase of assets and management acquisitions.

Option Adjusted Duration (OAD) is a measure that helps approximate the degree of price sensitivity of a bond to changes in interest rates adjusted for the option to call or put.

Option Adjusted Spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option.

Par - The term at par means at face value. A bond, preferred stock, or other debt instruments may trade at par, below par, or above par.

Tenor refers to the length of time remaining before a financial contract expires.

S&P ratings represent Standard & Poor's opinion on the general creditworthiness of a debtor, or the creditworthiness of a debtor with respect to a particular debt security or other financial obligation. Ratings are used to evaluate the likelihood a debt will be repaid and range from AAA (excellent capacity to meet financial obligations) to D (in default). In limited situations when the rating agency has not issued a formal rating, the security is classified as non-rated (NR).

Spread is the percentage point difference between yields of various classes of bonds compared to treasury bonds.

Yield-to-Maturity is the rate of return anticipated on a bond if it is held until the maturity date.

Yield-to-Worst is the lowest possible yield from owning a bond considering all potential call dates prior to maturity.

The Consumer Price Index (CPI) is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care.

Spread-to-worst (STW) measures the dispersion of returns between the best and worst performing security in a given market, usually bond markets, or between returns from different markets.
