Shenkman Capital Short Duration High Income Fund

May 31, 2022

ABOUT SHENKMAN

Shenkman Group of Companies manages over $29.9 billion in assets*, $7.2 billion of which is in our high yield short duration strategy. The firm was founded in 1985 by Mark Shenkman, a pioneer in leveraged finance. We focus exclusively on analyzing and investing in high yield companies. We have offices in New York, NY, Stamford, CT, Boca Raton, FL, and London, UK.

*The Shenkman Group of Companies AUM represents $26.6bn managed by Shenkman Capital Management Inc. and $3.3bn managed by Romark Credit Advisors LP and its relying advisors. See disclaimers for additional important information on the Shenkman Group of Companies.

SHENKMAN ADVANTAGES

- **Philosophy:** Shenkman focuses first and foremost on capital preservation and avoiding defaults, which in our opinion are the two key drivers of success in short duration high yield.
- **Presence:** Shenkman combines the potential advantages of a $29.9bn high yield platform with the nimbleness of a $7.2bn short duration strategy.
- **Depth of Research Team:** Shenkman's 21 member credit research team is organized by sector with each analyst responsible for the entire capital structure and maturity spectrum.
- **Risk Management:** Innovative credit risk analytics that can help to outperform in difficult and uncertain markets.

[1]Data as of 05/31/22 is average annual total returns. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Fund performance current to the most recent month-end may be lower or higher than the performance quoted and can be obtained by calling 1-855-SHENKMAN.

Performance data shown with load reflect the Class A maximum sales charge of 3.00% and Class C maximum deferred sales charge of 1.00%. Performance data excluding the sales charges does not reflect the deduction of the sales charges and if reflected, the sales charges would reduce the performance quoted. The fund imposes a redemption fee of 1.00% on shares held for 30 days or less. Performance data does not reflect the redemption fee. If it had, returns would be reduced.

[2]Rating Agency: Standard and Poors; All ratings include each tranche within their respective ratings category.

^The adviser has contractually agreed to waive a portion of the fund expenses through January 27, 2023.

Mutual fund investing involves risk. Principal loss is possible. There can be no assurance that the Fund will achieve its stated objective. In addition to the normal risks associated with investing, bonds and bank loans, and the funds that invest in them are subject to interest rate risk and can be expected to decline in value as interest rates rise. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Diversification does not assure a profit, nor does it protect against a loss in a declining market. The SEC does not endorse, indemnify, approve nor disapprove of any security.

The Fund invests in foreign securities which involve political, economic and currency risks, greater volatility and differences in accounting methods. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management, and the risk that a position could not be closed when most advantageous. Leverage may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the fund to be more volatile than if leverage was not used.

HIGH YIELD MARKET COMMENTARY

Following four months of negative returns, the High Yield (HY) Bond market posted a positive month, primarily driven by a rally in late May. For the month, the ICE BofA US High Yield Bond Index (H0A0) posted a return of 0.27%, assisted by a decline in Treasury rates and spread tightening in the H0A0 of 60 basis points (bps) during the last five days of the month. The rally was driven by BBs returning 1.57% while Bs returned -0.56% and CCCs posted a -3.14% drop, creating the appearance of a "risk-off" rally. The higher-quality short duration segment of high yield also posted a positive return for the month, trailing the broader high yield market though experiencing less intramonth drawdown. The ICE BofA 0-2 Year Duration BB-B U.S. HY Constrained Index (H42C) returned 0.19%, while shorter-date U.S Treasuries posted modestly stronger results, measured by the ICE BofA 0-3 Year U.S. Treasury Index's (G1QA) return of 0.42% in May.

Looking at the market by duration, short-duration portions of the market posted negative returns while mid-duration (four to eight year option adjusted duration) buckets outperformed. By industry, Oil & Gas and Utilities outperformed while Healthcare and Consumer Discretionary sectors posted negative returns. Overall, default rates remained low with only one default in the month of May, new issue volume remained relatively light, and rating agency upgrades outpaced downgrades. The light new issue calendar combined with the number of upgrades to Investment Grade (IG) and some calls and tenders have led to the HY Bond market's size to contract year-to-date. Specifically, the percentage of BB rated bonds in the overall HY Bond market has declined from the aforementioned upgrades to IG following this comes after an extended period of BB expansion as a percentage of the overall market.

FUND COMMENTARY

The Shenkman Short Duration High Income Fund (the "Fund") posted a positive return for the period, behind the broader high yield market though with much less intramonth volatility given its higher quality and shorter duration positioning. Performance by credit rating echoed the broader high yield market trend as double-B's posted the strongest returns, whereas triple-C's were modestly negative. On a sector basis, Industrials and Leisure, Gaming, Travel posted the strongest contributions for the period while Healthcare and Technology were the largest detractors. Duration-to-worst decreased slightly to 2.0 years as the Fund's average bond price remained relatively unchanged at $99.53. The Fund's average final maturity ticked lower to 3.16 years, highlighting a continued conservative maturity profile. As a result of the continued overall market weakness, yields remained high and are up meaningfully from the beginning of the year. Corporate action activity decelerated from the prior month as high yield primary market activity declined sharply in May, amid volatility across markets. During the month, 4 bonds were called or tendered, representing just $24.8 million in proceeds (approximately 1.7% of the Fund's average market value) which were redeployed in other short duration opportunities at relatively attractive levels given the market weakness. The Fund continues to seek out compelling risk-adjusted return opportunities and strong credit selection as it remains mindful of liquidity risks and the interest rate outlook.

The HY market has experienced meaningful changes year-to-date. Prices in almost all segments have moved downward in unison for a majority of 2022 resulting in average price levels below par. After a relatively long period of limited performance dispersion, May experienced considerable differences in performance by rating quality. As an example, the difference in spread-to-worst between BBs and CCCs moved from approximately 572bps to 704bps over the month, with this dispersion in relative value being mirrored in other pockets of the market as well. We believe the late May rally may not be a complete shift in market sentiment, and could rather represent a sign that some investors are drawn to reinvest in the market at selected trigger points across yield and spread levels that can rapidly bring buyers into the market. However, in our opinion, it does not appear that major shifts are occurring in the market's expectations for high inflation, increasing rates, and slower economic growth; markets also appear to be anticipating continued geopolitical uncertainty. All of which, in our view, appears likely to keep volatility high. We believe the higher-quality short duration segment of the high yield market remains well positioned as a lower volatility solution with the ability to seek to capture risk-adjusted returns in the current environment.

The VIX Index is a measure of implied volatility in the stock market that is calculated on the basis of short-term index options on the S&P 500 Index. A high VIX index signals anxiety and fear in the market and typically occurs after a sharp decline in stock prices. A low VIX index generally follows calm markets and rising prices.

Basis point (BPS) is a value equaling one one-hundredth of a percent (1/100 of 1%).

Coupon is the periodic interest payment made to the bondholders during the life of the bond. Prepayment risk refers to payments made in excess of scheduled mortgage principal repayments.

Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates; it is expressed as a number of years.

Duration-to-worst is the duration of a bond computed using either the final maturity date, or a call date within the bond's call schedule, whichever would result in the lowest yield to the investor.

Mergers and acquisitions (M&A) is a general term that refers to the consolidation of companies or assets through various types of financial transactions. M&A can include a number of different transactions, such as mergers, acquisitions, consolidations, tender offers, purchase of assets and management acquisitions.

Option Adjusted Duration (OAD) is is a measure that helps approximate the degree of price sensitivity of a bond to changes in interest rates adjusted for the option to call or put.

Option Adjusted Spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option.

Par - The term at par means at face value. A bond, preferred stock, or other debt instruments may trade at par, below par, or above par.

Tenor refers to the length of time remaining before a financial contract expires.

S&P ratings represent Standard & Poor's opinion on the general creditworthiness of a debtor, or the creditworthiness of a debtor with respect to a particular debt security or other financial obligation. Ratings are used to evaluate the likelihood a debt will be repaid and range from AAA (excellent capacity to meet financial obligations) to D (in default). In limited situations when the rating agency has not issued a formal rating, the security is classified as non-rated (NR).

Spread is the percentage point difference between yields of various classes of bonds compared to treasury bonds.

Yield-to-Worst is the lowest possible yield from owning a bond considering all potential call dates prior to maturity.

The Consumer Price Index (CPI) is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care.

Spread-to-worst (STW) measures the dispersion of returns between the best and worst performing security in a given market, usually bond markets, or between returns from different markets.
